

Postdoc Position in Asymmetric Catalysis

A postdoc position is available in the research group of Dr. Ilija Čorić at the Department of Chemistry, University of Zurich.

The newly formed group at the University of Zurich performs research in the areas of organic and inorganic chemistry aiming at the development of advanced methods for homogeneous catalysis. We explore fundamental transition metal chemistry, as well as challenging reactions in organic synthesis and small molecule activation. Our goal is to advance the way molecules are made by enabling selective activation of strong chemical bonds in mild conditions. Specific areas of interest include: C-H activation, novel activation modes for catalysis, chemistry of multimetallic complexes, and design of chiral catalysts.

Applications that include cover letter, CV, brief research summary of previous work, transcripts of grades, and contact details of referees should be sent to: ilija.coric@chem.uzh.ch.
